UPDATE MDT LOGO WITH BATCH PROCESS

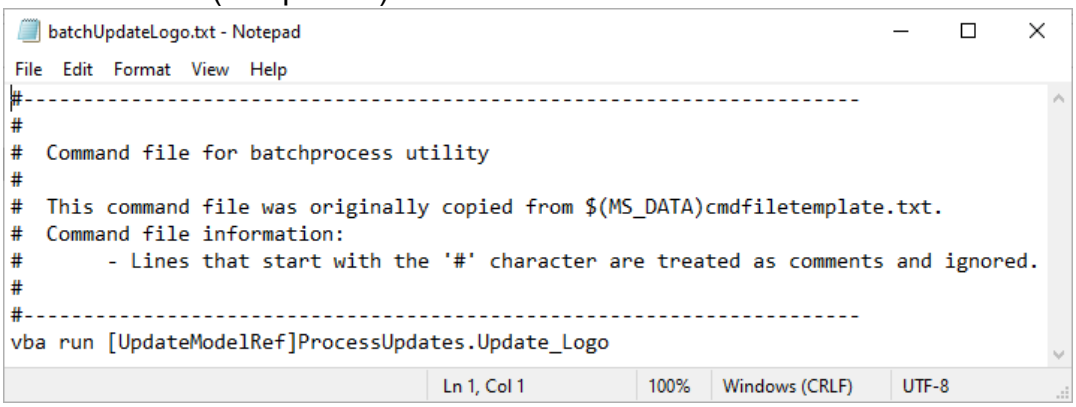

A macro is available to assist users with updating the MDT logo for R/W and Electrical enhanced workspace plan sheets having a REF1, EXHREF1, or Ref1 model where the logo resides. The Batch Process tool may be used to update multiple files.

1. Launch the Batch Process tool from within MicroStation (Utilities > Batch Process…).

2. Choose the “Create a new command file” button to locate “cmdfiletemplate.txt” and copy to a desired location for editing.

3. Rename and edit your copy of “cmdfiletemplate.txt” to include the “vba run” command line (see picture).

4. Choose “Browse for Command File” to load the Command File into the Batch Process tool.

5. Set “Initial Mode” to **Default Model Only**.

6. Choose “Add Files or Directories to Process” adding the desired files, then select them in “Process Tasks”.

7. Choose “Process Batch Process Job”, then “Process”.
